

Abe Pazos Solatie

Organic Computational Art

Portfolio 2025

D.A.V.E.

2018

Media: computer, software,
joystick, 4K display.

Interactive real-time
visualization representing two
entities as living organisms.

An arcade joystick allows the
viewer to interact with the
creatures.

Inner Island

2019

Media: 3D rendered video, 5min 13sec.

A story about a mind trying to come up with a great creative idea, represented by a world of stones wanting to become something they are not – organic. They attempt this by performing choreographic moves eliciting unsuccessful responses, like a novelist rewriting the same page over and over. Then something goes wrong.

<https://vimeo.com/363489966>

Ratkaisu

2019

Media: computer, software,
projection surface, wireless network, participant
mobile devices.

Ratkaisu is an interactive virtual 3D sculpture exploring how unique our decisions actually are, how they can be influenced, what are our biases, and to what extent free will is an illusion. Ratkaisu attempts to employ tricks used by advertisers, politicians and magicians, and explores the use of those tricks to manipulate the decision making process.

Commisioned by Rotondes,
Luxembourg.

A Point Between - album cover

2019

Media: offset print of a generative design created with custom painting software.

The cover of Floating Spectrum's debut album was created with a painting program I wrote for the occasion.

The colors were sampled from a photograph of fallen leaves in the jungle in Taiwan, arranged by their state between growth and decay, representing one of the core concepts of the album.

Floating Spectrum - live performance

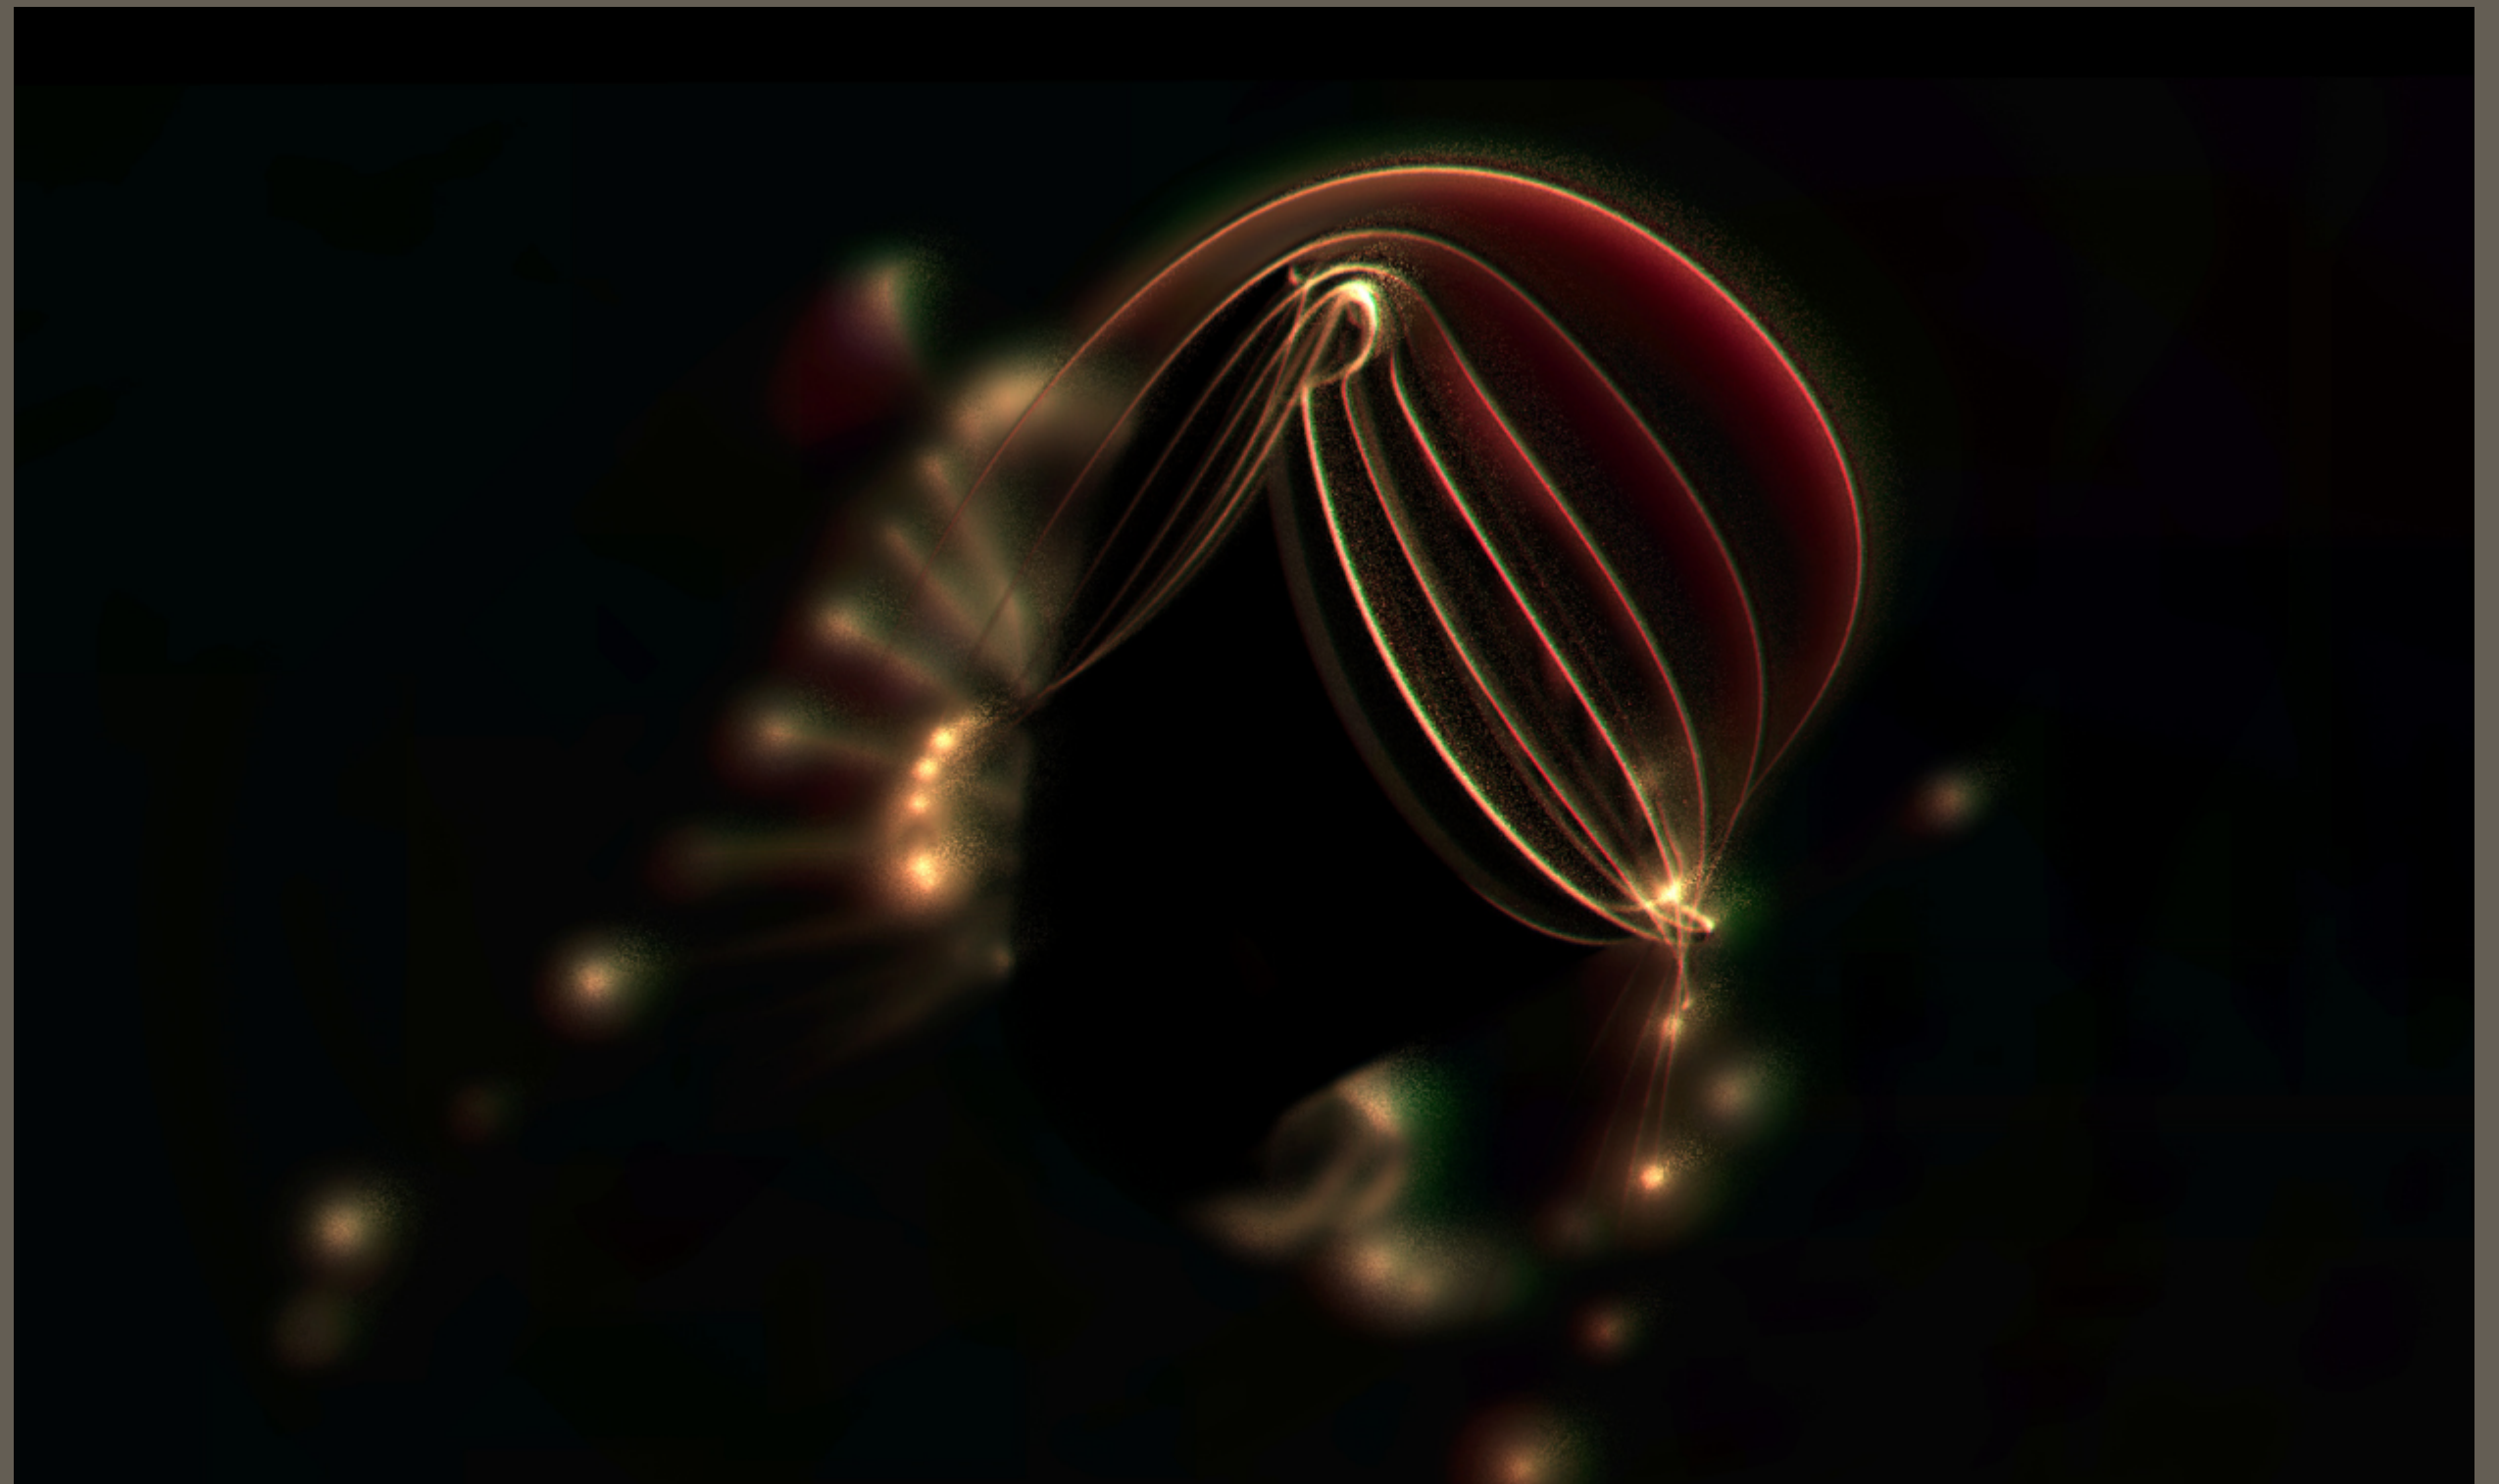

2016 - today

Media: computer, software,
projection surface, real-time controls.

A 30 minute generative audio
visual performance featuring
live music by Floating
Spectrum.

A slowly evolving organism
mysteriously connected to the
music. A story of birth, growth
and decay.

<https://vimeo.com/669140215>

Nested growth

2023

Media: pen plotter print on paper.

Algorithmic artwork produced for "Tracing the Line", a book published in November 2023.

An attempt to decipher intuitive, unspoken rules of doodling. How are lines allowed to connect to each other? What kind of geometry is perceived as Nature?

A Life Cycle

2022

Media: computer, software,
65" 4K vertical display.

A digital life-form created in
response to the ongoing
Holocene Extinction.

From a distance it may
resemble a still painting. Upon
closer inspection, the audience
can appreciate that it is
actually a fascinating living
creature that captivates us.
Never repeating visuals.
